Your Jazz Bass

Your *stock* SS Jazz Bass (*or clone*) uses controls to give you a “blend” of two pickup tones. You can improve it by installing our upgrade that gives you 6 pickup tones – twice the number of pickup tones that your bass has. This simple upgrade comes in acrylic black upgrade color and uses your existing pickups.

Your Player Jaguar Bass

Your *stock* PJ Jaguar Bass (*or clone*) uses controls to give you a “blend” of two pickup tones. You can improve it by installing our upgrade that gives you 6 pickup tones – twice the number of pickup tones that your bass has. This simple upgrade comes in acrylic black upgrade color and uses your existing pickups.

You can also improve your *stock* PJ Jaguar Bass (*or clone*) by installing our upgrade that gives you 21 pickup tones. This simple upgrade comes in acrylic black upgrade color and uses your existing pickups. You need to rewire the “P” pickup (*instructions show you how.*)

Your Precision Bass

Your *stock* Precision Bass (*or clone*) is a “one trick pony” giving you just one pickup tone. You can improve it by installing our upgrade that gives you 4 pickup tones – four times the number of pickup tones that your bass has. This user-installed upgrade is inserted into your existing pickguard and uses your existing “P” pickup that is rewired (*instructions show you how.*)

Details to install our products can be found on our website’s Document Library page.
